**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 05 April 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## **DETAILED ACTION**

### ***Allowable Subject Matter***

The indicated allowability of claim 3 is withdrawn in view of the newly discovered reference(s) to Kohl. Rejections based on the newly cited reference(s) follow.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being obvious over Hashim et al. (U.S. Patent No. 6,772,545) in view of Kohl (U.S. Patent No. 4,691,460).

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art only under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 103(a) might be overcome by: (1) a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not an invention "by another"; (2) a showing of a date of invention for the claimed subject matter of the application which corresponds to subject matter disclosed but not claimed in the reference, prior to the effective U.S. filing date of the reference under 37 CFR 1.131; or (3) an oath or declaration under 37 CFR 1.130 stating that the application and reference are currently owned by the same party and that the inventor named in the application is the prior inventor under 35 U.S.C. 104, together with a terminal disclaimer in

Art Unit: 3611

accordance with 37 CFR 1.321(c). This rejection might also be overcome by showing that the reference is disqualified under 35 U.S.C. 103(c) as prior art in a rejection under 35 U.S.C. 103(a). See MPEP § 706.02(l)(1) and § 706.02(l)(2).

Hashim et al. shows in figures 1-7 an attachment panel (12) having a left and right opening (the apertures in the panel 12 into which the fasteners 20 are received), a left main nut body component (18) attached to the attachment panel at the left opening and the left nut body having a plurality of license plate attachment openings (24,24), and a right main nut body component (16) attached to the attachment panel at the right opening and the right nut body having a plurality of license plate attachment openings (24,24). Hashim et al. discloses in column 4, lines 40-48 that the cross-bar (22) is sometimes not used. In these situations, the left nut component is independent from the right nut component. Each of the main nut body components include holes for aligning with the holes of at least two of North American license plate, Japanese license plate, Korean license plate, or Persian Gulf license plate. Hashim et al. does not disclose making the attachment holes comprise a blind bore formed in a closed end casing. Kohl shows in figure 2 the idea of including a closed end casing (70) with a bore formed within it for each hole. In view of the teachings of Kohl it would have been obvious to one in the art to modify Hashim et al. by making the attachment holes in the form of a blind bore formed in a closed end casing since this would allow the license plate to be attached to and removed from the holder in an easier and faster manner, i.e. a separate nut which would have to be held during assemble and disassembly would not be needed.

***Response to Arguments***

Applicant's arguments with respect to claim 3 have been considered but are moot in view of the new ground(s) of rejection.

***Allowable Subject Matter***

Claims 8-14 and 17-20 allowed.

Claims 4-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
